Take-Me-To-Dinner Application

Usage Scenarios

Landing Page:

The application landing page shows the application's search form. Users are allowed to search for dinner requests based on the State and City of the dinner requester's location:

The user selects the state from a list of values and enters the city name, for example, to get all dinner requests in Orlando, FL:

After clicking the "Seach" button, the user will be taken to the "Dinner Requests" page, showing all the requests available for that particular city. If no dinner requests are available for that city, a dialog message is shown informing the user no active dinner requests exist for that State and City.

The "Dinner Requests" page lists all active dinner requests:

The user reviews the available dinner requests and if interested in one, clicks on the "Take Me To Dinner" button.

A text field is displayed where the user can enter his/her contact information. After entering their contact details, the user clicks on the "Save" button to dismiss the text field and send a notification to the requester. If the user changes their mind, they can click on the close button and the notification will not be sent.

The requester will receive an email with the text entered by the user.

Dinner Request Page

This page shows a form where a user can create a dinner request.   The fields to include are:

User Name.

The state and city they live in.

A short bio.

Up to three (3) favorite restaurants where they would like to be taken to dinner.

An email address.

A text field with message: "Your email address will not be published nor visible to visitors of the web site."

A submit button.

Upon clicking the submit button, the request will be added to the list of active dinner requests.
